   Please show all work and **box your final answers**. If you need more room, you may use the backs of
the pages. Calculators are allowed, but cellphones are not. Good luck!

1. In order to settle a bet, eight friends weigh there wallets on a supermarket scale. The results are recorded
   below in ounces.

$$4.6 \quad 2.9 \quad 4.0 \quad 4.4$$
$$3.2 \quad 5.0 \quad 3.7 \quad 4.7$$

   (a) (4 points) Give the five number summary and draw a box plot of the data.

   (b) (4 points) Find the mean and standard deviation of the data.

2. The body mass indices of American men between ages 30 and 50 are normally distributed with a mean of 26.2 and a standard deviation of 4.7. Use the chart on the following page to answer the questions below.

   (a) (4 points) Determine the standard score and percentile of a BMI of 22.

   (b) (4 points) A person with a BMI of 30 has a higher BMI than approximately what percent of American men.

1. Areas under the Normal Distribution

The table gives the cumulative probability
up to the standardised normal value z
i.e.

$$P[\, Z < z \,] = \int_{-\infty}^{z} \frac{1}{\sqrt{2\pi}} \exp(-\tfrac{1}{2}Z^2)\; dZ$$

z	0.00	0.01	0.02	0.03	0.04	0.05	0.06	0.07	0.08	0.09
